Hard Start/No Start Diagnostics																																														
NOTE: A hard start/ No start concern with EOT Temp. below 60F perform step 10 first.				7. Retrieve Continuous Trouble Codes See Fig. E 6005E 2 • DTCs retrieved during this test are historical faults. Note: IDM DTCs are cleared when codes are cleared <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Diagnostic Trouble Codes</td> <td style="width: 50%;"></td> </tr> </table>				Diagnostic Trouble Codes		10. Glow Plug System Operation See Fig. E & G 6005E 5 Relay Operation • Glow Plug ON time is dependent on oil temperature and altitude. The Glow Plug relay/Glow Plug Control Module (GPCM) comes on between 1 and 120 sec. and does not come on at all if oil temp is above 131 F • On GPCM equipped vehicles, check continuous and KOEO codes. If codes are present go to pinpoint test QB. • On Glow Plug Relay equipped vehicles verify that B+ is being supplied on the large BK/WH wire. • Install a voltmeter to the glow plug feed terminal (two brown wires) • Using the NGS GPCTM and EOT pids, verify glow plug "on" time . • Turn key to run position, measure voltage ("on" time) (Dependent on oil temperature and altitude) <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <th>Relay on time</th> <th>Spec.</th> <th>Measurement</th> </tr> <tr> <td>1 to 120 seconds</td> <td>B +</td> <td></td> </tr> </table> Note: Wait to Start Lamp "on" time (1 - 10 sec.) is independent from Glow Plug "on" time Glow Plug Resistance • Remove both 9 pin connectors from valve covers • Measure each Glow Plug resistance to Bat. ground. • Measure engine harness resistance to relay or GPCM <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <th>Glow Plug Number</th> <th>Glow Plug to Ground .1 to 2 ohms</th> <th>Connector to relay or GPCM connector 0 to 1 ohms</th> </tr> <tr><td>#1</td><td></td><td></td></tr> <tr><td>#3</td><td></td><td></td></tr> <tr><td>#5</td><td></td><td></td></tr> <tr><td>#7</td><td></td><td></td></tr> <tr><td>#2</td><td></td><td></td></tr> <tr><td>#4</td><td></td><td></td></tr> <tr><td>#6</td><td></td><td></td></tr> <tr><td>#8</td><td></td><td></td></tr> </table>				Relay on time	Spec.	Measurement	1 to 120 seconds	B +		Glow Plug Number	Glow Plug to Ground .1 to 2 ohms	Connector to relay or GPCM connector 0 to 1 ohms	#1			#3			#5			#7			#2			#4			#6			#8

ICP	500 PSI or 3.4mPa min.																																													
FUEL PW	1 mS to 6 mS																																													
2. Check Engine Oil Level See Fig. C 6005E • Check for contaminants (fuel, coolant). • Correct Grade/Viscosity. • Miles/Hours on oil ,correct level. • Check level in reservoir. <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Method</td> <td style="width: 50%;">Check</td> </tr> <tr> <td style="text-align: center;">Visual</td> <td></td> </tr> </table>				Method	Check	Visual		3. Intake/Exhaust Restriction See Fig. B & L 6005E • Inspect air filter and ducts - exhaust system • Inspect exhaust back pressure device <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Method</td> <td style="width: 50%;">Check</td> </tr> <tr> <td style="text-align: center;">Visual</td> <td></td> </tr> </table>				Method	Check	Visual		4. Sufficient Clean Fuel See Fig. A 6005E 6 • Check if the WATER IN FUEL lamp has been illuminated. • After verifying that there is fuel in the tank, drain a sample from fuel filter housing at key on. NOTE: Fuel pump will run for 20 sec. at key on. <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Method</td> <td style="width: 50%;">Check</td> </tr> <tr> <td style="text-align: center;">Visual</td> <td></td> </tr> </table>				Method	Check	Visual

Method	Check																																													
Visual																																														
Method	Check																																													
Visual																																														
5. Electric Fuel Pump Pressure See Fig. I 6005E 7 • Verify that the fuel pump has voltage and gnd. present at key on. • Measure fuel pressure at the top of the right cylinder head with a (0-160 PSI) gauge at key on. <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <th>Instrument</th> <th>Spec.</th> <th>Measurement</th> </tr> <tr> <td>0-160 PSI Gauge</td> <td>45 PSI min.</td> <td></td> </tr> </table> If pressure fails low, Go to step 8c on the Performance side of this sheet to identify cause.				Instrument	Spec.	Measurement	0-160 PSI Gauge	45 PSI min.		A V PWR - If indicating a low voltage condition, check battery voltage, charging system or power and ground circuits to the PCM. GO TO PINPOINT TEST A B RPM - Low RPM could be an indication of starting/ charging system problems, No RPM indicated with the engine cranking - could be CMP circuit fault, check for Diagnostic Trouble Codes. GO TO PINPOINT TEST DG C ICP - A minimum of 500 PSI (3.4 mPa) is required before the injectors are enabled. No or low oil in the reservoir, system leakage, injector O-Rings or faulty IPR could cause pressure loss. Go to section 4 step 9c in the PC/ED Manual for a detailed description on how to perform this test. Note: If no RPM signal is received, IPR duty cycle will default to 14% D FUEL PW - Even though a 1 to 6 mS FUEL PW is shown, its possible the IDM did not receive the signal due to a CI or FDCS circuit fault or internal IDM failure.																																				
Instrument	Spec.	Measurement																																												
0-160 PSI Gauge	45 PSI min.																																													
6. Perform KOEO On Demand Test See Fig. E 6005E 2 • Use the NGS Tester • DTCs set during this test are current faults. Note: IDM DTCs displayed here could be current or historical faults. <table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Diagnostic Trouble Codes</td> <td style="width: 50%;"></td> </tr> </table>				Diagnostic Trouble Codes																																										
Diagnostic Trouble Codes																																														

See PC/ED manual, Section 4A for more detail on all of the above test steps.

When troubleshooting a Hard Start/No Start or Performance concern, this form must be filled out to the point of repair and returned to receive warranty credit and diagnostic time for the following parts:
 Fuel Injectors (9E527), regulator-injection control pressure(9C968), pump assemblyhigh pressure oil (9A543), turbo charger assembly/pedestal (6K684), fuel pump (9350), IDM (12B599) and PCM (EEC)(12A650)
 Labor operations listed more than once are a continuation of the diagnostic procedure and should be claimed only once.

What problems were found and what repairs were performed?

List Part Name, Number and Serial Number of parts replaced.

		<p align="center">-NOTE- IF CONCERN IS FOUND, SERVICE AS REQUIRED. IF THIS CORRECTS THE CONDITION, IT IS NOT NECESSARY TO COMPLETE THE REMAINDER OF THE DIAGNOSTIC PROCEDURE.</p>					CUSTOMER NAME

Test MUST be measured between extension
tube and fuel feed line.
Econoline is equipped with tube. _____
F-Series needs this tube for test.

Diagram of a manifold gauge assembly with six ports labeled 1 through 6. The assembly includes five gauges: a 0-30 in. Hg vacuum gauge on port 1, a 0-30 PSI vacuum gauge on port 2, a 0-60 in H₂O differential pressure gauge on port 3, a 0-30 PSI pressure gauge on port 4, and a 0-160 PSI pressure gauge on port 5. The manifold is labeled 'VACUUM' for ports 1-3 and 'PRESSURE' for ports 4-6. A central needle is shown pointing to the 0 mark on the central gauge.
